## Adding Polynomials Worksheets

- 1) Subtract  $2x+1$  from  $8x^2 + 4x - 2$ .
  
- 2) Evaluate:  $(21x^2 + 14x - 2x) - (7x^2 + 1)$
  
- 3) On adding  $12t^8 + 6t^4$  with  $6t^4$  we will get  $15t^{12}$ .
  - True
  - False
  
- 4)  $(63r^{12} + 49r^{10} - 36r) - (9r^{10} - 6r) = \underline{\hspace{2cm}}$
  
- 5) Add the polynomials:  $(49d^3 + 84d^2 - 7d)$  and  $(7d - 49d^3)$ 
  - $7d^2 + 12d$
  - $84d^2$
  - $7d^2 + 84d$
  - $7d^3 + 12d$
  
- 6) Simplify the following polynomial expression.:  $(6x^2 - 9x - 9) + (2x + 3)$ .
  
- 7) Subtract the first polynomial by second:  $(-10a^2 - 6a + 6)$ ,  
 $5a^2 + 3a$
  
- 8) Match the following:
 

a- $(36q^2 - 30p^2 - 4) - (6q^2 + 5p^2)$	$p-q^2$
b- $(9p^2 + 4q + 3) - (-4q)$	$q-9$
c- $-9q^3 + 6q^2 - q - (-9q - 6)$	$r-12$
d- $(63a^4 + 54a^2 + 9a) + (7a^2 + 6a)$	$s- (-1)$

9) If the area of one rectangle is  $(p^2 - 14p + 45)$  and another rectangle is  $(p^2 - 14p)$ . Find how big is the first rectangle from the second rectangle.

10) Base of a triangle is given by  $2d+1$ . its remaining two sides are area is  $8d+4$  and  $6d-3$ , find its perimeter.

When you learn math  
in an interesting way,  
you never forget.

Math classes &  
counting

**100K+**

Students learning  
Math the right way

**20+ Countries**

Present across USA, UK,  
Singapore, India, UAE & more.

## Why choose Cuemath?

"Cuemath is a valuable addition to our family. We love solving puzzle cards. My daughter is now visualizing maths and solving problems effectively!"

- Gary Schwartz

"Cuemath is great because my son has a one-on-one interaction with the teacher. The instructor has developed his confidence and I can see progress in his work. One-on-one interaction is perfect and a great bonus."

- Kirk Riley

"I appreciate the effort that miss Nitya puts in to help my daughter understand the best methods and to explain why she got a problem incorrect. She is extremely patient and generous with Miranda."

- Barbara Cabrera

## ANSWERS

1)	$8x^2 + 2x - 1$
2)	$14x^2 + 12x - 1$
3)	False
4)	$63r^{12} + 49r - 30r$
5)	$84d^2$

6)	$6x^2 - 7x - 6$
7)	$-15a^2 - 9a + 6$
8)	a-r b-s c-p d-q
9)	45
10)	$16d - 2$

## FUN FACT

1. If  $a$  is the first term of an AP,  $d$  is the common difference,  $n$  refers to the number of terms, then  $a_n$  refers to the general term of the arithmetic sequence given as:  $a_n = a + (n-1)d$
2. If we have the first term  $a$ , the last term  $a_n$ , the number of terms  $n$ , then we can find the sum to  $n$  terms by the following equation:  $S_n = \frac{n}{2} \{a + a_n\}$
