FACTORING TRINOMIALS WORKSHEETS

- 1) Factor the trinomial $x^2 - x - 20$.
- 2) Factor the trinomial $x^2 + 12x + 32$.
- 3) Factor $3p^2 + 8p + 4$.
- 4) Is $2x^2 + x + 2$ prime? Justify your answer.
- 5) Factor $6n^2 + 6n + 6$. Is it prime?
- 6) Solve $r^2 + 15r + 54 = 0$ by factoring.
- 7) The length of a theatre's screen is 7 ft more than twice its width. Find the dimensions of the screen if its area is 184 square feet.

- 8) Factor $2x^3 + 20x^2 + 32x$.
- 9) Factor $9p^2 + 12pq + 4q^2$.
- 10) Can we help Jim to answer the following?
If six times the sum of twice a number and 1 is equal to -6

times its square, then find the number(s).

Why choose Cuemath?

"Cuemath is a valuable addition to our family. We love solving puzzle cards. My daughter is now visualizing maths and solving problems effectively!"

- Gary Schwartz

"Cuemath is great because my son has a one-on-one interaction with the teacher. The instructor has developed his confidence and I can see progress in his work. One-on-one interaction is perfect and a great bonus."

- Kirk Riley

"I appreciate the effort that miss Nitya puts in to help my daughter understand the best methods and to explain why she got a problem incorrect. She is extremely patient and generous with Miranda."

- Barbara Cabrera

**ANSWERS**

1)	$(x - 5)(x + 4)$
2)	$(x + 8)(x + 4)$
3)	$(3p + 2)(p + 2)$
4)	Yes, as it cannot be factorized further
5)	$6(n^2 + n + 1)$; It is not prime as we could factorize it
6)	$r = -9; r = -6$
7)	23 ft x 8 ft
8)	$2x(x + 2)(x + 8)$
9)	$(3p + 2q)^2$
10)	-1

FUN FACT

Here are some tips to factorize a trinomial:

1. Factor out any number if possible before factorizing the trinomial.
For example,
$$2x^2 + 10x + 12 = 2(x^2 + 5x + 6).$$
2. If we cannot find two numbers whose product is ac and whose sum is b to factorize a trinomial $ax^2 + bx + c$, then the trinomial cannot be factorized further.
3. If a trinomial cannot be factorized further, it is said to be prime.
