TWO STEP ALGEBRA EQUATIONS WORKSHEETS

1) Solve the equation $4.2x + 14.9 = 2.3$.

2) What value of k satisfies the equation $\frac{k+5}{\left(\frac{1}{4}\right)} = -5$?

3) Solve the equation for v .

$$\frac{v}{8} + \frac{5}{6} = -2\frac{5}{8}$$

4) p and q are connected by the equation $5p - 6q = 16$. If $q = \frac{3}{7}$, find the value of p .

5) If $x = -1$ and $2x + 3y = 8$, find the value of y .

6) The length of a fridge is 3 units more than twice its width. If the length of the fridge is 13 units, then find its width.

7) Find the value of m using the following parallelogram.

8) How old is Michael if 4 times of his age reduced by 750 is - 602?

9) Jonathan has \$95 and he bought 8 notebooks (each of the same cost). After buying the notebooks, he has \$9 left. Then what is the cost of each notebook?

10) On Monday, Emma bought some CD boxes, each with 5 CDs inside it. On Wednesday, she gave 12 CDs to her friend and now she has 88 CDs left. Then how many CD

boxes did she buy initially?

When you learn math

Why choose Cuemath?

"Cuemath is a valuable addition to our family. We love solving puzzle cards. My daughter is now visualizing maths and solving problems effectively!"

- Gary Schwartz

"Cuemath is great because my son has a one-on-one interaction with the teacher. The instructor has developed his confidence and I can see progress in his work. One-on-one interaction is perfect and a great bonus."

- Kirk Riley

"I appreciate the effort that miss Nitya puts in to help my daughter understand the best methods and to explain why she got a problem incorrect. She is extremely patient and generous with Miranda."

- Barbara Cabrera

**ANSWERS**

1)	$x = -3$	
2)	$k = \frac{-25}{4}$	
3)	$v = \frac{-83}{3}$	
4)	$p = \frac{26}{7}$	
5)	$y = \frac{10}{3}$	
6)	5 units	
7)	$m = 23$	
8)	37 years	
9)	\$10.75	
10)	20 CD boxes	

FUN FACT

1. To solve a two-step equation, we always apply two operations.
2. The two operations can be adding a number on both sides, subtracting a number from both sides, multiplying by a number on both sides, (or) dividing both sides by a number.
3. To solve a two-step equation, we always apply the opposite operations. Addition and subtraction are the opposite operations of each other, whereas multiplication and division are the opposite operations of each other.
